**Drug NDC: 59310-0210-12**  
**Drug Name: QNASL**

**What is this medicine?**

BECLOMETHASONE (be kloe METH a sone) is a corticosteroid. It helps decrease inflammation in your nose. This medicine is used to treat the symptoms of allergies like sneezing, itching, and runny or stuffy nose. This medicine is also used to prevent the return of nasal polyps.

**This medicine may be used for other purposes; ask your health care provider or pharmacist if you have questions.**

**How should I use this medicine?**

This medicine is for use in the nose. Follow the directions on your prescription label. Do not use more often than directed. Make sure that you are using your inhaler correctly. Ask your doctor or health care provider if you have any questions. Talk to your pediatrician regarding the use of this medicine in children. While this drug may be prescribed for selected conditions, precautions do apply.

**Overdosage: If you think you have taken too much of this medicine contact a poison control center or emergency room at once.** NOTE: This medicine is only for you. Do not share this medicine with others.

**Where should I keep my medicine?**

Keep out of the reach of children. Store at room temperature between 15 and 30 degrees C (59 and 86 degrees F). Throw away any unused medicine after the expiration date or after the labeled number of sprays have been used, whichever comes first.

**NOTE: This sheet is a summary. It may not cover all possible information. If you have questions about this medicine, talk to your doctor, pharmacist, or health care provider.**

**What should I tell my health care provider before I take this medicine?**

They need to know if you have any of these conditions: glaucoma, infection (especially a virus infection such as chickenpox, cold sores, or herpes), recent surgery or injury of nose or sinuses, receiving corticosteroids like dexamethasone or prednisone, an unusual or allergic reaction to beclomethasone, other corticosteroids, other medicines, foods, dyes, or preservatives, pregnant or trying to get pregnant, breast-feeding

**What if I miss a dose?**

If you miss a dose, take it as soon as you can. If it is almost time for your next dose, take only that dose. Do not take double or extra doses.

**What should I watch for while using this medicine?**

Visit your health care professional for regular checks on your progress. Check with your doctor if your symptoms do not improve in 1 to 2 weeks of regular use. This medicine may increase your risk of getting an infection. Tell your doctor or health care professional if you are around anyone with measles or chickenpox, or if you develop sores or blisters that do not heal properly.

**What side effects may I notice from receiving this medicine?**

Side effects that you should report to your doctor or health care professional as soon as possible: allergic reactions like skin rash, itching or hives, swelling of the face, lips, or tongue; breathing problems; changes in vision; nosebleed; signs and symptoms of infection like fever or chills; cough; sore throat; white patches or sores in the mouth or nose; Side effects that usually do not require medical attention (report to your doctor or health care professional if they continue or are bothersome): burning, irritation in nose or throat; changes in taste or smell; headache; runny nose

**This list may not describe all possible side effects. Call your doctor for medical advice about side effects. You may report side effects to FDA at 1-800-FDA-1088.**

**What may interact with this medicine?**

Interactions are not expected. Do not use any other nose products without talking to your doctor or health care professional.

**This list may not describe all possible interactions. Give your health care provider a list of all the medicines, herbs, non-prescription drugs, or dietary supplements you use. Also tell them if you smoke, drink alcohol, or use illegal drugs. Some items may interact with your medicine.**
